For its headquarters in Munich GAF AG is looking for people who are passionate about Earth Observation and want to make an impact with the huge data streams we collect from satellites. This is an opportunity for a **Senior Statistician/Data Scientist** to strengthen our interdisciplinary teams, in the field of agriculture but also in further disciplines, in order to support ongoing and future projects.

**GAF AG** is a globally operating company with 35 years of leading expertise in the development and implementation of geo-information products and services. With more than 200 highly qualified employees, we offer geo-data, data processing, geographic information systems, database applications, software development, international consulting and project management as well as development assistance.

**Your tasks:**

- Cross-sectoral statistical support and product quality assessment
- Plan, conduct and supervise statistical analysis and modelling projects
- Development and application of area-frame sampling techniques for agricultural/environmental statistics
- Contribution to the product developments with special focus on agriculture
- Conceptualisation of statistical frameworks, proposal preparation and reporting
- International institutional strengthening and training

**What to expect:**

- A job in one of Europe’s leading geo-service companies
- Diverse and responsible tasks in the exciting environment of Earth Observation
- A friendly and respectful working atmosphere in an international, interdisciplinary and young team of highly committed specialists
- Working cross-functional with other teams according to agile principles
- A personal mentor for your convenient and seamless start
- An easy to access, modern workplace close to the city centre
- Flexible working hours as part of our flexitime arrangements
- International health insurance, company pension scheme
- Fully equipped kitchen, free coffee/tea, table football and much more...

**Your profile:**

- University degree (MSc) in statistics or a relevant subject
- Minimum 5 years of working experience in applied statistics
- Hands on experience in data analytics and statistical standard software suites (especially with STATA, SPSS and R)
- Experience in development of sampling designs for large surveys (household, agriculture, business surveys and etc.)
- Experience in data analysis (especially in spatial and multivariate data analysis)
- Experience in development of statistical forecasting models
- Excellent verbal, written and technical communication skills
- Self-motivated, independent and responsible work style in a team-oriented environment
- Resilience, humour and the ability to keep an overview in labour-intensive phases
- Ready to travel
- Fluent in English

**Desirable knowledge:**

- Experience in GIS and Remote Sensing applications
- Knowledge in another (foreign) language such as Spanish, French and/or German
- Working experience with agricultural/environmental datasets
- Knowledge of UN Sustainable Development Goal Indicators
- Experience with collaborative projects (international donors)
